

Heftin

AI/ML & COMPUTER VISION INTERN

About Heftin AI

Heftin AI is building enterprise-grade AI infrastructure for education and workforce transformation. Our flagship platforms include Academy OS, an AI-powered academic operating system, and Interview OS, an intelligent hiring and talent assessment platform.

Role Overview

We are looking for AI/ML engineers passionate about Computer Vision, LLMs, OCR, and intelligent automation. You will work directly with the founding team to build production-grade AI systems used by thousands of users.

Key Responsibilities

- Build and optimize OCR pipelines for handwritten and document-based content
- Develop prompt engineering and evaluation frameworks using OpenAI, DeepSeek, and other LLM platforms
- Design Retrieval-Augmented Generation (RAG) systems for grounded and reliable outputs
- Build document understanding and information extraction workflows
- Evaluate and improve AI model accuracy, consistency, and performance
- Participate in research and prototyping of multimodal AI systems

Required Skills

- Python
- NLP Fundamentals
- LLM APIs (OpenAI, Anthropic, DeepSeek, etc.)
- Data Processing and JSON Handling
- Strong Problem-Solving Skills

Good to Have

- OpenCV
- OCR Systems
- LangChain or LlamaIndex
- Vector Databases
- Speech-to-Text Systems
- Audio Processing Pipelines

What You'll Work On

- Handwritten Answer Evaluation Systems
- AI Tutors & Learning Assistants
- Interview Assessment Engines
- Document Intelligence Pipelines

Heftin

BACKEND ENGINEER INTERN

About Heftin AI

Heftin AI develops secure, scalable AI platforms serving education and enterprise customers. Our systems process large volumes of evaluation data, analytics, AI workflows, and user interactions.

Role Overview

As a Backend Engineering Intern, you will build and scale the core infrastructure powering our AI platforms.

Key Responsibilities

- Design and develop scalable REST APIs using FastAPI
- Build backend services supporting AI evaluation and analytics workflows
- Design optimized PostgreSQL database schemas
- Implement authentication, authorization, and role-based access control
- Develop asynchronous services for AI-intensive workloads
- Integrate third-party AI and cloud services

Required Skills

- Python
- FastAPI or Similar Frameworks
- SQL & Database Design
- REST API Development
- Data Structures & Algorithms

Good to Have

- PostgreSQL
- Redis
- SQLAlchemy
- Docker
- AWS
- Async Programming

What You'll Work On

- AI Evaluation Engines
- Student Analytics Systems
- Interview Assessment Platforms
- Enterprise Workflow Automation

Heftin

FRONTEND ENGINEER INTERN

About Heftin AI

At Heftin AI, we build modern AI-powered products that require intuitive, high-performance user experiences across web and mobile platforms.

Role Overview

We are looking for Frontend Engineers who can transform complex AI workflows into elegant and user-friendly applications.

Key Responsibilities

- Build responsive and scalable interfaces using React and TypeScript
- Develop dashboards for analytics, evaluation, and AI-powered workflows
- Integrate frontend applications with backend APIs
- Manage application state and asynchronous data flows
- Optimize performance and user experience
- Ensure cross-device responsiveness

Required Skills

- React.js
- TypeScript
- JavaScript (ES6+)
- HTML5
- CSS3

Good to Have

- Redux Toolkit
- React Query
- Material UI (MUI)
- Next.js
- Formik
- Yup

What You'll Work On

- Faculty Evaluation Dashboards
- Student Analytics Cockpits
- AI Interview Interfaces
- Administrative Portals

Heftin

QA & DEVOPS ENGINEER INTERN

About Heftin AI

Heftin AI delivers enterprise-grade AI platforms where reliability, security, and deployment automation are critical.

Role Overview

We are seeking a QA & DevOps Intern to help ensure application quality, deployment stability, and cloud infrastructure reliability.

Key Responsibilities

- Design and execute API testing workflows
- Build automated testing pipelines
- Configure and manage AWS environments
- Monitor application performance and reliability
- Implement CI/CD pipelines using GitHub Actions
- Support production deployments and troubleshooting

Required Skills

- Linux Fundamentals
- Git & GitHub
- API Testing
- AWS Basics
- Debugging & Troubleshooting

Good to Have

- Docker
- GitHub Actions
- Selenium
- Playwright
- Monitoring & Logging Tools

What You'll Work On

- Production Deployment Pipelines
- Cloud Infrastructure
- Automated Testing Systems
- Security & Reliability Workflows
